Experience

Data and AI Intern | 06/2026 to 08/2026 | Teladoc Health, Remote - United States

- Elevated model recommendation accuracy from 51% to 77% by building and automating a Snowflake data stewardship GradientBoostingClassifier model driven by Verato demographic datasets
- Drastically minimized manual review time for data stewards by delivering an end-to-end automated pipeline and interactive Streamlit dashboard featuring Snowflake Cortex LLM-generated decision explanations
- Eliminated internal information retrieval bottlenecks by an estimated 65%–70% by prototyping a centralized, multi-source LLM chat interface and unified sales dashboard during a company-wide design thinking initiative

Data Science Intern | 01/2026 to 04/2026 | PM Accelerator, Remote - United States

- Architected a multimodal backend, automating game asset generation by integrating the Gemini API for image-to-text scene understanding and diffusion models for dynamic sprite creation
- Engineered a seamless asset generation workflow that converts user-uploaded images into ready-to-use animated sprites for a web-based game engine, using open-source tools and OpenRouter API orchestrations
- Elevated game quality and improved platform responsiveness by 83% by orchestrating LLM-driven pipelines and integrating Replicate API sound effects, contributing to attracting 25+ closed beta testers

Graduate Assistant | 10/2025 to Present | Maryville University, Saint Louis, MO

- Reduced manual content creation time and ensured a diverse question pool across 10 courses reaching 300+ students by creating a high fidelity library of Python and LaTeX based question templates for a question generation model
- Streamlined the content validation process and improved consistency by 60% of course material prior to deployment by developing mathematical logic to verify accuracy and refining templates to eliminate logic errors

Education

Master of Science: Data Science, Expected in 05/2027

Maryville University of Saint Louis, Saint Louis, Missouri GPA: 4.0

Bachelor of Science (Hons): : Computer Science (Artificial Intelligence), 07/2024

Heriot-Watt University, Dubai, United Arab Emirates GPA: 3.2

Projects

RAG Career Engine

Engineered a scalable, end-to-end RAG Career Intelligence System and contextual AI Interview Coach utilizing LlamaIndex, Gemini 1.5 Flash, BGE embeddings, and Streamlit, implementing a hierarchical node index and Map-Reduce synthesis pipeline that accelerated job-matching precision, automated technical skill gap identification, and reduced application discovery overhead.

Skills

Python, R, SQL, Java, C++, C#, Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, Multimodal AI Integration, Large Language Models (LLMs), RAG (Retrieval-Augmented Generation), Gemini 1.5 Flash, Gemini API, OpenRouter API, Replicate API, Snowflake, Snowflake Cortex, Verato, AWS Redshift, Jenkins, Diffusion Models, Prompt Engineering, LlamaIndex, BGE Embeddings, LangChain, Supervised/Unsupervised Learning, CNNs, Neural Networks, Random Forests, SVM, Linear/Logistic Regression, Decision Trees, K-means Clustering, Model Evaluation, Exploratory Data Analysis (EDA), Feature Engineering, Data Stewardship, Anomaly Detection, Matplotlib, Seaborn, Streamlit, Git, GitHub, FastAPI, Playwright, LaTeX.
